App Name

Spendly AI

Subtitle

Know what you can spend today

Description

Spendly AI helps you answer one everyday money question: how much can I safely spend today?

Add your income, fixed expenses, purchases, buffer, and savings goals. Spendly AI calculates a simple daily amount from your own budget data, updates it as you spend, and explains the result in short, practical language.

The app is built for manual budgeting without bank connections. Your core financial data stays on your device, and AI explanations use only the summary values needed to answer your question.

Key features:

- Daily safe-to-spend amount
- Quick purchase logging
- Fixed expenses and savings goals
- Friendly budget explanations
- Local fallback when AI access is unavailable
- English, Norwegian, and Thai language support
- Light, dark, and system appearance

Spendly AI is budgeting guidance, not professional financial advice.

Keywords

budget, spending, savings, expenses, money, finance, daily budget, AI budget, personal finance, goals

Age Rating Recommendation

4+

The app does not contain user-generated public content, web browsing, gambling, alcohol, tobacco, medical treatment, or explicit content.

Review Notes

Spendly AI is a manual budgeting app. It does not connect to banks and does not request bank credentials, BankID, or payment account access.

AI access is designed to work through a backend/proxy before production so no secret API key is embedded in the iOS app. If AI access is unavailable, the app shows local fallback guidance and remains usable.

Core calculations are deterministic and performed locally by the budget engine. AI does not calculate balances or invent financial numbers.

Demo And Test Information

No special demo account is required.

Suggested review flow:

1. Complete onboarding with a monthly income, next payday, minimum buffer, and one savings goal.
2. Open Home to see the calculated safe-to-spend amount.
3. Add a purchase and confirm the daily amount updates.
4. Open AI and ask a budget question.
5. Open Settings to review privacy/support information and notification settings.
